

SPARK Pro
It simply works.

Meeting industry requirements

Designed for a clear industry purpose

We listened to you. Supplier prices are soaring. Harvests are unpredictable. And competition is high. We analyzed every component and pushed down every profit margin to create our most affordable sorter ever. Giving you the Bühler quality, and 75 years of industry-leading experience with unbeatable value.

In line with Bühler's vision to create innovation for a better world, SPARK invites everyone to access food safety standards via optical sorting. **With SPARK, businesses can access quality and consistent performance to create safe food for all without a heavy price tag.**

Simple operation

Zero-spillage

Multi-commodity

Bühler performance

SPARK: It simply works.

Meet SPARK, a revolution in simple, reliable performance

Critical design elements explained:

- 1 Zero spillage concept to avoid product losses
- 2 Multiple modules available from 1 to 10 chutes
- 3 Bühler developed HD full colour cameras
- 4 Five times faster setup due to "Hue Saturation Value"
- 5 Higher size sorting capacity
- 6 DynamoAi, newly developed sorting engine
- 7 2x more light with full spectrum LED lighting

Sorting, Simplified

Core features

Hue Saturation Value

HSV is the fastest and easiest way to set up and sort to the highest possible performance without deeply depending on skilled staff/operators. SPARK is five times faster to set up in comparison to previous models.

Ease of use

With the newly developed sorting algorithm, operating SPARK is child's play. From the dashboard to the engine, everything is designed for ease of use, inviting peak performance without the need for highly skilled operators.

Size sorting

Experience the new DynamoAI engine on simple undersize and oversize sorting tasks.

Reflection and transparency sorting modes

SPARK is able to sort in reflection and/or transparent sorting modes. This core feature is linked to the product mode.

Designed for performance

New developments that make the difference

New cameras

Bühler's inhouse developed HD full colour cameras will help you to detect and successfully eject all kind of visible defects down to a size of only 0.0025mm².

New lighting

Bühler's inhouse developed Full Spectrum LED lighting system will enhance your sorting performance to the next level. Achieve higher differentiation between good and bad product especially on transparency sorting applications.

Zero spillage

Reduce product losses with SPARK's zero-spillage design, ensuring no single kernel leaves the machine and loses money.

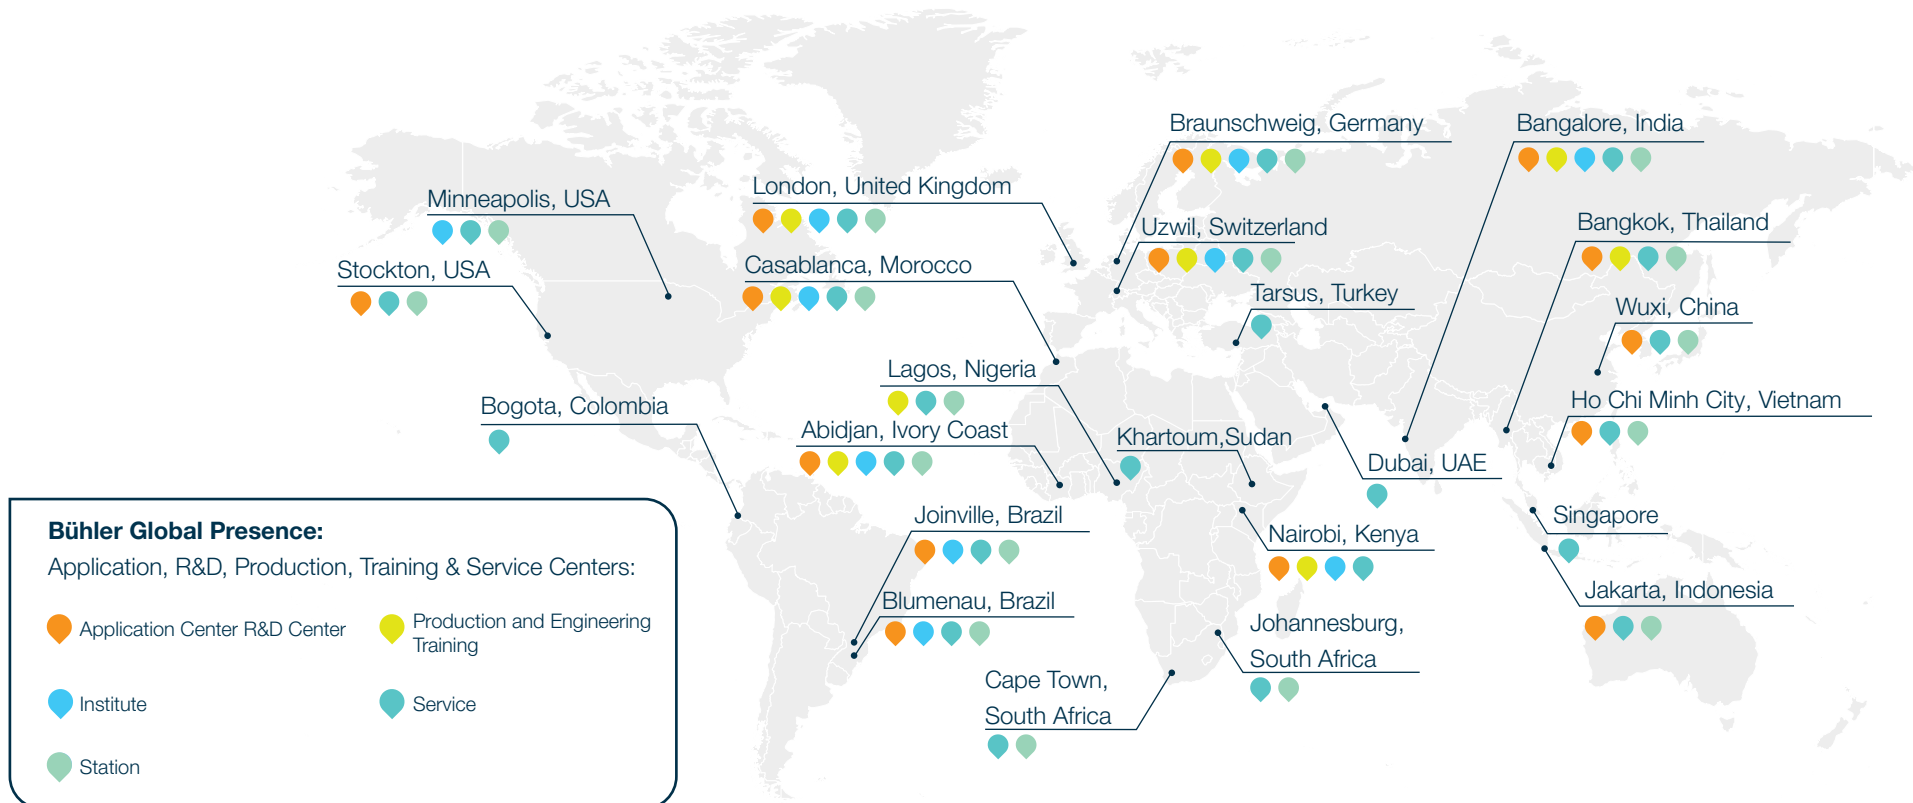

Localization services: Application, Training & Service Centers

Bühler customers are represented in more than 140 countries worldwide. By providing customer services such as maintenance, parts supply and training courses, you can be confident that your color sorters are kept running efficiently, at optimum capacity and with maximum return on investment.

To date, Bühler has more than 25,000 color sorters installed worldwide, operating in production plants of all sizes and helping customers achieve higher productivity and profitability.

With a global presence, customers can experience our broad range of functions locally, including the provision of equipment, service and support to local customers. In addition, we have application centers in key grain markets including India and China, each with some of the world's best grain technology experts.

With more than 150 years of engineering experience, Bühler is able to meet the different needs of grain handling, processing and storage in each region, developing appropriate grain processing and value-added technology solutions for its customers.

Color sorting solution Applications

Defects and foreign material

Stones

Glass

Paddy and foreign seeds

Sticks

Mung beans

Green coffee beans

Soybeans

Sunflower seeds

Red sichuan peppers

Blanched almonds

Red beans

Roasted
coffee beans

Sesame seeds

Cotton seeds

White peppers

Pet plastic flakes

Color

Various

Mudballs

Bühler intelligent color sorting solutions

Technical details

Model	Weight	Width	Depth	Height	Air pressure	Air consumption	Power consumption	
	(kg)						(mm)	(mm)
SPARK 1	420	900	1668	1900	≥0.6	<1.5	1,8	1,5
SPARK 2	800	1643	1668	1900	≥0.6	<2.0	2,6	2,2
SPARK 3	1000	1643	1668	1900	≥0.6	<2.5	3,0	2,3
